INDIAN CURE-ALL PLANT

(Also known as Mescal Button, Dry Whiskey, Sacred Mushroom and the botanical name is Lophophora Williamsii. It is a cactus.)

Peyote is a part of the Indian religion in the southwest of the U.S. and most of northern Mexico.

Be the first to get this rare and unusual plant! Dozens of books and hundreds of newspaper and magazine articles have been written about this unusual plant. It is spineless and bluish in color with a beautiful pink flower. Requires practically no attention and is easy to grow.

Aldous Huxley in Saturday Evening Post (Oct. 18, 1958) has this to say about Peyote, "Taste and see that the Lord is good. The perusal of a page from even the most beautiful written cookbook is no substitute for eating of the dinner."

Christmas Cactus

SOIL — Does well in almost any good garden soil. Needs no feeding except when buds begin to set.

WATER—Not oftener than three times weekly during growing and blooming phase. After blooming, it needs rest with almost no water given it.

PESTS—Almost immune. Yellow leaves and flower buds dropping off may be caused by too much water.

HEAT—Moderate to cool.

LIGHT — When buds show, place plant where it gets sun part of day.

PROPAGATION—Take cuttings in spring, at place where aerial roots have come out. Let cuttings lie for a few days to callous over, then pot in ordinary soil.

COMMENT — Set pot outdoors in summer and forget about it. Bring it in before frost, withhold water for about six weeks, then begin to water about time to produce buds for Christmas bloom.

A LITTLE CHIT-CHAT FROM AUNT PAT

Our advertisement for three free cactus, if you will send 25c for mailing charges is for three cactus only. The Gold Ball is included in the three—not in addition to the three.

All orders are shipped in heavy corrugated boxes—except the three free cactus.

Give your cactus plants about half the water and half the attention you usually give other plants and they will thrive. Also, they must not have over half-sun.

Be sure to get some other cactus catalogs to compare prices . . . I'm sure you will find that your old Aunt holds the prices down to the very minimum.

Read all of the other papers we enclose with this order for many timely specials that are usually offered for a short while only.

Pot all succulents in one third sand and two thirds good soil. If the roots stand in water just one night they will rot. Cactus is a succulent.

These plants are all house plants and will not stand extreme cold weather. Do not leave them outside when it is freezing weather.

Be sure to print your full and correct address each time. We get many packages returned to us because the sender did not write it plainly.

Resurrection plant is strictly a curiosity. You cannot grow it and if left in water more than one hour it will rot. If kept dry it will revive when put in water.
